Abstract

In this paper are described studies of the team of Prof. Momchil Dobrev and Prof. Mariola Garibova proving the truth about the real possibilities to build a generator for free energy based on the THEORY OF THE UNIVERSUM developed by Prof. Mariola Gariova and Prof. Lord Momtchil Döbrev - Halachev in the Year 2005, Basics of the Cosmological Theory of Information and Vortex Field Theory developed by Lord Prof. Momtchil Döbrev 1991 - basic structure of the universum "

Keywords : *theory, universum, vortex field, energy-information genetics.*

I. INTRODUCTION

1991 Prof. Dr. Momchil Dobrev-Halachev creates his theory of vortex fields and Cosmological information theory. The explanation of how information and energy is transmitted on what paths, based on Momchil Dobrev-Halachev's theory of vortex fields and cosmological information theory. 1991 Prof. Momtchil Dobrev-Halachev build 4 different of construction of machines that generate free energy from the universum. One of this construction explain the truth about Prof. Newton's bucket.

Stepping on his theories Prof. Dr. Momchil Dobrev-Halachev, with the help of Prof. Mariola Garibova, 2005 they both developed the "Theory of Universum" and related connections to the Free-energy generators, Energy-information genetics, energy-information medicine, energy-information psychology and psychiatry..

II. A device created in 1991 by Prof. Momchil Dobrev - Halachev which proves free energy, zero point, free energy generator.

1991 Prof. Momchil Dobrev - Halachev development of the following experimental unit, which actually proves the availability of free energy, how it can be absorbed, used, realized.

The device is a disc that is rotated. The movement that causes rotation with an additional motor. On the disc are radii devices that measure the force of weight measurement. On one side, the device at the end of the periphery is fastened with an eraser, the other end of the weight, which measures how heavy a weight is, is attached to a ring that rotates freely around the axis of rotation of the disk. Several such devices are placed on the disk along the respective diagonals of two at respective radii. Fig2. and F3.

When the axle is driven and the disc is rotated, it has a variable relay, which can increase the rotation of the device or decrease the angular velocity accordingly. The disc is fixed firmly to the rotary-driven axle.

After turning the disc clockwise, the weight adjustment devices of one object stretch to the periphery of the disk. This action is a result of the equilibrating force that results from the rotation of the equilibrating disc. Thus measuring the force that appears and is directed from the center of the disk - the device to the periphery. Fig 1.

As a result, the force that appears F2 is many times greater than the force that rotates the disk F1. Fig 1.

As the rotation increases, this force F2 becomes even greater. In fact, the energy obtained from the

output F2 is many times greater than the energy of the force F1.

A. Conclusions:

- a) In fact, the point of rotation of the disk is the "ZERO POINT", which creates and causes the force F2 to occur. This system can be controlled simply and efficiently, giving the output energy - in this case F2 is many times higher than F1.
- b) In reality, this system is a system of free energy generation.
- c) This principle of action can also be used in other systems related to electric field and electromagnetic field and magnets respectively.
- d) This principle is universal in the Theory of the Universe, the basic principles of which will be described later in the article.
- e) The force F2 is always perpendicular to F1.

B. This design and system proves how a star system, a galaxy is built. The forces that cause the planets to rotate around a star, galaxies around the center of a galaxy, act in the same way.

It's the same system.

C. Proofs. Evidence.

Turning a closed system clockwise at a given rotational speed produces the same helical rays as are present in a galaxy. Fig.6, Fig.7.

D. Explanation of Newton's bucket phenomenon

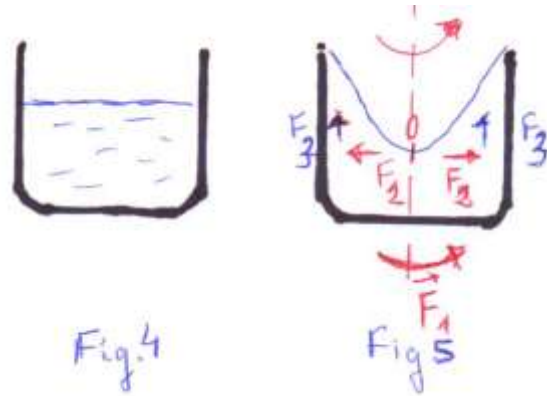

The device described in point 2 actually proves and describes the phenomenon observed in the so-called Newton bucket.

Below is an explanation of the Newton bucket phenomenon.

Likewise, a zero point appears at the center of the system, which creates the force F2 that acts from the center of the system to the periphery along the radius of the system.

In this way the water mass is displaced on the basis of the action of force F2 at the periphery of the vessel - the bucket. Because the fluid is limited by the bottom and the walls, the force pushes the fluid from the center of the system to the periphery on the wall above the vessel, since the density of the system is maintained and because the density of the water mass remains the same, the water mass which, due to the force F2, pushes the water mass to the periphery of the vessel, it is displaced by the force of the force F2 up the walls of the vessel to balance the system. Fig 4 and Fig 5.

In fact, at point O, the zero point appears, which causes the F2 bulge, which is from the center to the periphery, along the entire circumference of the disk.

III. Basics of the THEORY OF THE UNIVERSUM developed by Prof. Mariola Gariova and Prof. Lord Momtchil Dobrev – Halachev in the year 2005, basics of the Cosmological theory of Information and Vortex Field Theory developed by Lord Prof. Momtchil DOBrev - Criticism of Relativity Theory of Albert Einstein and Supplementation of Quantum Theory

Basic Principles of THEORY of Universum - Unified Theory of the Universe, Critique of Relativity Theory of Albert Einstein and Supplementation of Quantum Theory

1991 Momchil Dobrev creates Cosmological theory of information (Dobrev , 2009) and theory of vortex fields (Dobrev , 2012)- the basis of everything. In the same year Momchil Dobrev created two free energy generators using the theoretical and practical solutions of both theories, creating prototypes, but actually refusing to start regular production because he knows that all

scientists and inventors create such generators soon after they are killed.

The real vortex theory proves the existence of swirling fields in the fabrication of matter at the lowest to the highest level, starting from the atomic structure, to the construction of star systems, galactic systems of the universe. On the other hand, the vortex fields are also present in the construction and functioning of the human body.

On the other hand, the cosmological theory of information proves that vibrations are the basis of the existence of all objects in the universe and man in particular. Even at the cellular level there are precisely defined vibrations of precisely defined frequencies and frequency spheres. Each cell, even every organ vibrates with exactly the same frequency when it is in a state of health and certain other ones when it is in a disease state. The deviation from the interval norm of the "healthy" body vibrations proves the opposite that the body is sick.

In February 1985, Momchil Dobrev, under the leadership of Professor Karl Heinz von Gotte, found superconductivity, but because of the intervention of a Bulgarian state security agent then working at the Berlin embassy in Berlin and the US CIA, stealing materials and betraying them, but Momchil Dobrev refuses, is forbidden to publish the discovery. So 1985 because of State Security cop Prof. Gote and Momchil Dobrev are not awarded the Nobel Prize in Physics. The Nobel Prize in two years has been given to two scientists from Switzerland to discover superconductivity in September 1985. - seven months after Prof. Gote and Momchil Dobrev.

The vortex fields actually carry, distribute, create both information and energy. There is actually a conversion of information into energy and vice versa. In fact, on the basis of the theory of the vortex fields, the passage of the material in the process of materialization and dematerialization is undisputed, in which the processes do not lose the information. On the other hand, the vortex fields are the basis of matter and antimatter. Swirl fields emit vibrations precisely defined and at specified intervals.

This is the relationship of the vortex fields with the cosmological information theory.

Three distinct principles apply to each swirling system:

There is a force that is at the heart of the whirlwind - in its center, and it controls the entire structure. For each imi structure swirling forces that cause the structure to strive for center, swirling forces that cause the structure to strive for external propagation, and a separate force that prevents objects from the structure from leaving the structure itself - that is, has the force of limiting the size of the structure.

Vortex structures are also hurricanes. In the center of hurricanes is peace.

There are chakras in the human body both at the physical level and at the other two levels, which besides supplying information and energy to the respective glands and levels and organs at these levels, but it also raises the energy to the highest level. The whirling structure that radiates the corresponding vibration - its section

Light is a vortex. Each electromagnetic wave is a whirl, the point at which both the electric field and the magnetic field are the zero point. Moreover, the space generating the vortices is geometrically based on the golden section, the numbers phi and pi. Electromagnetic wave is a whirlwind in a straight line. A basic element in the cosmological theory of information is also to note the basic principle.

The single field covers and is based on vortex fields. The dissemination of energy, of information becomes unique with the swirling movements in a spiral way - right rotation. This is the easiest way to predict energy and information in the universe. That is why it is the connection of information and energy, ie. both are transmitted in the same way. Only this is the way of spreading energy and information - the vortex fields. Energy and information are not distributed on STRUMENTS. THE VORTEX FIELD and its forms are THE BASIS OF THE SINGLE FIELD.

The vibrations had a swirling structure.

Only the vortex structure can spread in one space - in this case the Cosmos.

Spreading information into space is purely a whirlwind principle.

The two theories prove that real human thought can be both a carrier of both information and energy and cause changes at the material level and at the spiritual level.

There are 12 dimensions of consciousness, the basics of which are types of vortex fields. Only On the first density level (first, second and third dimension) lies our incarnate self.

At each density level corresponds a certain type of matter and type of consciousness - that is, an information field with an information structure for the relevant plurality level.

Our first harmonic universe, or that of Earth, we have a biological structure that is based on carbon and matter is on a physical level.

In the depths of a harmonious universe where our souls inhabit, there is a silicon-carbon biological structure, and matter is on a physical-etheric level, also called a semi-etheric level.

In a third harmonic universe, the creatures are composed of crystalline silicon and the matter of net is entirely etheric.

The biological structure of the fourth harmonic universe, where the current levels of consciousness or the state of its current state are found, is a "crystalline liquid light," and the particles at that level are called premastery.

Dimensions 13, 14 and 15 at five density levels are composed of antimatter (other than antimatter) and the biology of the beings there is called "crystalline light radiation".

At the three levels above this dimension, namely polaris, triadic and euatec levels, the beings are of pure consciousness and these levels are not considered dimension.

Our soul includes us and eleven incarnated personalities, or a total of twelve people.

Our soul together with another 11 people forms our air. Accordingly, the smell is composed of 144 incarnated personalities.

Twelve halves make up the Christ avatar, which includes 144 people and 1,728 incarnate personalities.

Accordingly, 12 Christ avatars are connected and make up one rhesus adept.

The relics of the Adept include, in turn, a further 144 breaths, 1,728 people and 20,736 incarnate figures.

All 12 personalities of the soul are placed in the so-called time vector. They are arranged as the clock on the dial is marked. In this way, 6 pairs of born persons are formed. These are 1 and 7, 2 and 8, 3 and 9, 4 and 10, 5 and 11, 6 and 12.

Most energy is allocated to pairs 12 and 6 as well as to pairs 3 and 9. These personalities are called "((the ethics" faces of the soul ".Most often position 12 is a man and position 6 is a woman.They have the same DNA template.

Clearing the link with your own avatar helps strengthen everyone's biofields and creates protection from negative intrusions up to 12 dimensions.

A. Whirlwinds, vibrations, information, energy.

The dissemination of information in space is only a whirlwind.

The information is read, recorded, modified in a vortex and vortex manner.

Even at the cellular level, there are precisely defined vibrations with precisely defined frequencies and frequency spectra.

Vibrations represent vortex fields.

Reading and executing information In DNA, it is only a vortex principle.

The whirlwinds - vortex principle is at the heart of the creation of universes with the sun and planets orbiting it.

Vortexes are the motions that control the motion in atoms.

Every cell, even every organ, vibrates with the exact frequency when it is in a healthy state and precisely defined others when in a diseased state. The deviation from the interval norm of a "healthy" organ vibration proves to the contrary that the organ is ill.

Vortex fields actually carry, propagate, generate both information and energy. There is actually a conversion of information into energy and vice versa. Indeed, based on the theory of vortex fields, the passage of the material in the process of

materialization and demythialization in which processes do not lose information is indisputably proven. Vortex fields, on the other hand, are the basis of material and antimatter. Vortex fields emit vibrations at precise and specified intervals.

This is the connection of vortex fields with the cosmological theory of information.

B. There are three definite principles for each vortex system:

There is a force underlying the whirlwind - at its center and commanding the whole structure. For each structure, there are vortex forces that cause the structure to aspire to the center, vortex forces that cause the structure to strive for outer space, and a separate force that prevents objects from the structure from leaving the structure itself - ie. there is a force limiting the size of the structure.

Vortex structures are also hurricanes. At the center of the hurricanes is peace.

In the human body there are chakras both at the physical level and at the other two levels, which, in addition to supplying information and energy to the relevant glands and levels and organs at these levels, also raises energy to the highest level.

The vortex structure that emits the corresponding vibration - its cross section

Light is a whirlwind.

Each electromagnetic wave is a vortex and the point at which both an electric field and a magnetic field are generated is the zero point.

In addition, the vortex-generating space is geometric, with the main factors here being the gold section, the numbers ϕ and π .

As a consequence of the cosmological theory of information are the pyramids between which is the Pyramid of Cheops. This geometric figure is a generator of a corresponding field in which, at the corresponding points of height, when the corresponding frequency or so-called vibration is generated, the anti-gravity, the processes of dematerialization and dematerialization are also generated.

Electromagnetic wave is a vortex in a straight line.

Both theories prove that real human thought can be a vehicle for both information and energy, and it can cause changes at the material and spiritual levels.

Both theories prove that real human thought can be a vehicle for both information and energy, and it can cause changes at the material and spiritual levels.

Testing experiments have been performed at the Scientific Research Institute Dobrev - Halachev AD to prove this.

According to the cosmological theory of information, in order to reach the chakras of the fourth and fifth dimensions of the soul, vibrations should be raised. this was happening in Egypt with a generator.

According to the cosmological theory of information, when a person raises his or her vibration that below 45 degrees with closed eyes generates a light beam with a corresponding vibration frequency, then that light beam and, accordingly, his gaze - with closed eyes below 45 degrees passes through a specific symbol - that is the symbol of Ankh, also known by Atlantis and the Atlanteans. This is the symbol through which the elevation and the corresponding look pass.

There are 12 dimensions of consciousness, the basis of which are types of vortex fields. Only one

Therefore, the DNA helix is double and counter-clockwise.

Reading information from DNA is in that one and only direction.

This is the direction of reading and writing information.

Snakes indicate the generation of the power that the information reads.

This is the direction of energy generation and maintenance of vortex fields.

C. Movements in the Atomic Nucleus

The electrons move in an electronic field. The electron materializes as an electron after leaving the atomic field.

The nucleus of an atom creates a vortex field and rotates with a precisely defined vibration, which is the vibration of the nucleus and electron field.

Each atom vibrates with a specific spectrum and has a specific vibration.

D. MOVEMENT SYSTEM IN THE SOLAR SYSTEM

The solar system exists on the basis of rays that propagate along the Fibonacci trajectory of the golden section towards the end of the solar system and from there it returns back along the same trajectory to the center of the solar system - the sun. In these rays, vortex fields move along which concentric circles move planets to the solar system, perpendicular to the plane of motion of planets from the center of the solar system to the end solar system, there is a field that closes the field and makes it stable.

E. The ether is the medium for the movement of light.

F. Gravity is the result of the vortex motion in the solar system and the vortex motion of the Earth around its axis.

G. Whirlwinds

The chakras are vortices

Rotating motion - accelerating the field - the center generates free energy. Thus, and based on these truths, Prof. Momchil Dobrev 1991 created two free energy generators.

Ether - the essence of space and the medium for the movement of light.

Gravity is the result of vortex movements.

Different vortices

Light is a vortex - a linear vortex.

Vortexes in the plains.

The electromagnetic wave is a whirlwind

The neutrino carries information.

An electron is a materialized particle in an electron field - it materializes in an electron as it leaves the atom.

Rotating the kernel causes vibrations.

Vortices have different properties.

Feynman schemes - vortex interaction.

The rotation of the nucleus creates different space and electronic space-field.

An electron is a materialized object of electronic space.

H. The world is fluid.

The world is fluid - it is the middle - space. Just as the speed of sound is precisely defined in the middle - the fluid atmosphere,

As the velocity in water is precisely defined in the medium - the fluid - the aqueous medium.

So the speed of light is precisely defined in the medium - the fluid - the expanse of the ether.

The cyclone - a typhoon is a fluid with an element in the center of a gas molecule.

The galaxy is a fluid with an element in the center of the vortex - a star. Plasma is fluid. Types of fluids cause different spaces.

Fluids with homogeneous elements / homogeneous / homogeneous fluids.

Fluids with heterogeneous different elements - heterogeneous fluids.

Electrically neutral fluids

Polysyrin and fluids.

Electric and magnetized fluids

Ionized fluids - plasma.

The world is a fluid space. Ie it is a closed system - the universe.

Vacuum is a heterogeneous fluid.

Hyperbolic geometry in physics.

Sound waves, electromagnetic waves are a kind of vortex field.

Space has a vortex character and essence

Space is a field, it has a quantum character, a material character, an informational character, a conscious character.

Every vohir carries information - information

Space is fluid in nature. According to fluid in space there are vortices that can be opened, closed vortices, point, linear, plane, and others.

The laws of thermodynamics are valid for fluids.

As the temperature decreases, the velocity of the gas component - the particle decreases faster than the gas volume, including the gas radius.

It thus follows that the ratio of the radius to the velocity increases, i.e. the passage of the gas portion

along the radius increases - i.e. this is evidence of an expanding universe.

Closed vortices have different shapes, one of which is fertilizer and the other is a universe. The quantum is a vortex.

The first duality is "space + and" motion "

The first manifestation is a current in space

When space moves, it has a special quality - since it has no friction - that it never loses momentum but continues to flow.

I. The forces in space, the universe, the galaxy.

When space moves, there are TWO FORCES:

- a / the force that makes it move, being the aspiration of space for impulse

- b / the force which had hitherto kept him from moving, being the desire of space for inertia.

The pursuit of movement outweighs the pursuit of inertia,

The pursuit of inertia acts as a brake on motion, so the movement is slightly distorted.

Therefore, in the end, it returns to where it started and forms a rotating circle - such as the solar system, the galaxy system, the atomic system.

THE FIRST MOVEMENT IS A CURRENT SPACE.

After aeons, it returns from where it left,

THIS MAKES A HOLIDAY ROUND BELT.

This belt rotates in a plane, rotates with constant rotation.

The rotation in one plane continues until the stress it creates causes a new movement and does not start a new current in space - at right angles to the first, and the same process is repeated.

We now have two rotating planes, one in the other, and it is worth noting that the second plane is formed beyond the first, and therefore its diameter is larger.

The whole evolution depends on the difference and size of these planes.

When the higher acquires the same speed as the smaller and the older, it begins to attract an aspect of it, with the result that the older circle is drawn to the newer one.

The first circle should be considered as having an upper and lower surface. The upper surface of the upstream arch can be regarded as positive and the lower surface as negative. The downward arc is the opposite.

Same with the Second Emerging Circle.

These circles are mutually attracted and repulsed so that you can imagine the upper surface of the ascending arc (of the first circle) being positive, ascending to its corresponding aspect in the second cycle, and the lower surface of the returning arc pressing down so to get a second movement divided by rotating disks.

When this second movement completes its first lap and establishes its steady rotation, a new COSMOS occurs. This is the origin of the cosmos.

The secondary rotation of the first circle is the RING - THAT CANNOT BE MOVED, and the circle of the second formation is that sphere that sets the boundary of the Sphere - the so-called chaos.

There is a secondary branch on the outer sphere, and though it is a rotating circle of motion, for that Cosmos it represents the primary calmness, the immobility in which it is rooted.

It is the FRAMEWORK of the power of KOMSOM, that which assimilates and which alone allows the momentum to be acquired.

THE RING - The so-called Chaos arises from the reaction of the primal force to get its impetus.

It rotates at right angles to the primary rotation and counteracts it.

It is the attraction of the Ring - Chaos that establishes the Ring - COSMOS in its secondary motion and thus forms that secondary rotation which we call the RING - WHAT - CAN'T - BE - MOVE, the first restriction that restricts every universe, the galactic

That is why, in its essence, it is the ORIGINAL movement that enables space to emerge.

The Law of Counteraction - THE FIRST IMPULSE BREAKS A secondary impulse, so that a secondary impulse, in contrast to the first, creates stability.

Secondary rotation occurs as a reaction to the primary rotation.

Restriction is as its function is as a DISPLAY SUPPORT.

It should be understood as a limitation that allows pressure to emerge - as a rejection that allows concentration to be achieved.

Any progress toward a higher plan is a reaction to the constraint.

WE HAVE THE ORIGINAL ROTATION OF THE RING-COSMOS, the counteraction gives rise to the RING - the so-called Chaos, the attraction of the Ring-Chaos, causes the secondary rotation of the Ring-the Space, forming the Ring-which cannot-pass.

This motion in the RING-SPACE, rotating in a plane and at the same time rotating in space as if on an axis, sets a boundary beyond which the creations of the sphere cannot pass.

THIS SPHERE IS DANGEROUS BY TWO POWER LINES - RINGS - SPACE and RINGS - CHAOS, rotating at right angles to each other ..

The rotation of the Ring-Cosmos is the source of the force from which evolution derives its impulse, and the rotation of the Ring-Chaos is the source of the force from which restriction draws its power.

THE RING - CHAOS did not belong to the dangerous sphere, but to the outer space.

THE RINGS OF THE RING-SPACE are facing the sphere that it encircles.

The aspirations of the RING - CHAOS are turned to the space that surrounds it.

The Ring - Space seeks to expand the center.

The Ring - Chaos seeks to expand the periphery.

The Ring - Space seeks to harden by contraction.

The Ring of Chaos seeks to return to the UNDERTAKEN from which it arose, and therefore, if its influence were unimpeded, it would reduce the sphere which is in danger.

THE RING - SPACE if its influence were unimpeded, it would be static in the immediate present.

THESE TWO INFLUENCES ARE THE SOURCE OF ALL POWER IN THE SPACE.

THE RING-SPACE, because it hardens, builds, THE RING-CHAOS, because it scatters, never grows.

POWER CIRCUITS THROUGH A ROTATE ANGLE WITH respect to each other and therefore in opposition, and that simply the angle of the first that arises is called "positive" and the opposite angle of the primary plane is called "negative" and is quite possible in another Space the first plane has started to rotate at another angle - the angle of your "negation".

In one galaxy are twelve beams and seven cosmic levels.

Space consisting of THREE rotating motions.

Movement in space - pure movement.

The primal movement that gives rise to all that exists begins before there is anything that moves.

The SPACE is limited by this movement, which is called - THE RING - WHAT - CAN'T - CAN - BE - BE - MOVE. This is the limit of any galaxy, the solar system, of one atom.

There are also two-way movements.

The Ring of Space and the Ring of Chaos.

These three movements - the first trinity, so the supreme being in a new manifestation is always understood as the TRINITY - and three is a fundamental number.

Whatever subsequent tensions may arise, they cannot be regarded as a balance of these three forces:

a / The power of the Ring Space, which strives for the center.

b / the power of the Ring - Chaos - which strives for outer space.

in / the power of the Ring - which - cannot - be crossed, which maintains a balance between them and

The Ring - which cannot be-transmitted is derived from the RING - SPACE and is therefore more a part of its nature than of the Ring-Chaos.

The Space Ring seeks to focus energy as the Ring Chaos seeks to dissipate.

The Chaos Ring cannot build anything because whatever force it generates, it is dissipated indefinitely in the outer space.

The motion of the cosmic ring creates secondary vortices, it is bounded by the ring - chaos,

so the inward band expands into a rotating disk with a fixed center.

In practice, this becomes a rotating sphere. This system gives rise to rotating radii, which we call rays. This is a spiral connecting the center to the periphery

Le there are streams that flow to the periphery, then the stream flows to the center.

The center is a synthesis and balance of all forces.

Le there is a flow of rays from the outside and then inwards.

The outward flow stream is at the top and the inward flow stream is down i.e. circular motions are created. The movement of rays and concentric circles. The rays are 12 and the concentric circles are seven

Le tangent raises are obtained. The intersection of circles and rays generates vortices - a tangential motion at an acute angle.

There are interactions between the rings, the interaction of the secondary rays and concentric circles, tangential motion.

There is movement of rings, rays, and concentric circles, movement on tangents inside the segment, movement in vortices.

IV. Basics of the ENERGY- INFORMATION GENETICS, ENERGY- INFORMATION PSYCHOLOGY, ENERGY-INFORMATION PSYCHIATRY, ENERGY-INFORMATION MEDICINE based on the THEORY OF THE UNIVERSUM developed by Prof. Mariola Gariova and Prof. Lord Momtchil Dobrev – Halachev in the year 2005,

The theory of universum , which in turn distinguishes:

- "energy-informarion medicine "
- "energy-information genetics",
- "energy-information psychology"
- "energy-Information Psychiatry"

On the basis of the Cosmological Information Theory and Vortex Theory Theory, Mariola Garbova and Momchil Dobrev elaborate 2005. Theory of Universum.

We will briefly state that, based on the research of the human energy system and how it affects precisely defined diseases such as the identification system and consequently as a method of therapy and healing, it has been proven that the chakras actually represent the human energy centers double swirls that can rotate both on one side and the other. The interdependence of man's energy is energetic in the environment at both the conscious and the subconscious level, he has demonstrated the connection of human states, diseases, diseases, to the state of man's energy system - chakras, energy flows, consciousness, subconscious.

In fact, diseases that have been studied by Mariola Garibova and Momchil Dobrev have found an easy and adequate explanation. This, in turn, not only provides an explanation for the types of illness, but also gives a realistic guide to their therapy holistically - ie. complex - physical and spiritual - ie. energy.

Based on these studies, the following sections of medicine, biology, psychology, genetics,
- "energy-information genetics",
- "energy-information psychology"
- "Energy-Information Psychiatry"

Since the current article allows for such a voluminous viewing of matter that requires a monograph of at least 1500-2000 pages, we will give the results briefly below.

A. Consciousness and information

Information is the primordial essence that gives birth to everything and everything alive. Information is part of consciousness, which is a living system that stores, receives, renews, sends, manages the processes, movements, actions of life.

Consciousness / through information influences the energy field and accordingly through it on matter.

Consciousness / through information and based on signals from:

- The medium / through food /
- environment / nature, plants, animals /
- the environment / Earth's energy information field /
- the medium / information energy field of a person - another person /
- the medium / information - the energy field of the Sun /
- the environment / energy information field of the universe /
- the environment / other people's energy information fields /
- the environment / from the subconscious - from past lives, past experiences in, present and past experiences from previous lives

Information is influenced and controlled and controlled, commanded accordingly by energy fields, which in turn affect matter.

There is an energy - information matrix / consciousness / on Earth, in the sun, in the universe, in man.

Consciousness is an information field that is different for different types of density, depending on different dimensions of the field.

Consciousness is an information matrix that corresponds to and is composed of the consciousness of different fields - field structures.

For humans - depending on the fields - information fields have 12 dimensions of consciousness, the basis of which are types of vortex fields. Therefore, the DNA helix is double and

counter-clockwise. Reading information from DNA is in that one and only direction.

This is the direction of reading and writing information. Snakes in antiquity show the generation of the power that reads information.

This is the direction of energy generation to maintain vortex fields.

The Twelve - the Six Double Threads Prove the Existence of a 12 Dimensional Dimension - Space - 12 Dimensions of Human DNA.

B. Vibrations, resonance - a method of treatment of diseased organs, structures

Resonance - a method of treating diseased structures and organs.

The importance of vibration for diagnosing the human body and organs and determining the correct diagnosis.

Each cell emits specific vibrations, each organ emits specific vibrations. When an organ is healthy, it emits precisely defined frequencies in the frequency range between 7 and 8 meters. When an organ emits a frequency that is lower than the normal / healthy / frequency or higher than the healthy frequency, that organ is ill.

Separately, every human feeling radiates a precisely defined frequency.

Positive feelings such as joy, peace, love, silence, and others radiate frequencies that are harmonious with frequencies of harmony.

Negative thoughts such as fear, envy, anger, greed, hatred emit specific frequencies.

When one emits such frequencies that are specific to fear, envy, anger, hatred, the total cumulative frequency of the person is lower.

The cumulative frequencies are as follows:

- Lows from 2.7 to 9.7
- Lows above 9.7 to 26
- High - more than 28 to 56
- Senior - more than 56 to 115
- Highest - more than 115 - up to 205

Above 265 is the frequency of the next human race.

The "negative vibrations" are the following:

- Fear from 0.2 to 2.2
- Offense - from 0.6 to 3.3
- Outrage - 0.6 to 1.9
- Explosiveness - 0.9
- Rage - 0.5
- Anger - 1.4
- Gordelivostk - 0.8
- Pride - 3.1
- Neglect - 1.3
- Excellence - 1.9
- Pity - 3

The person who possesses positive qualities he emits higher frequencies:

- Thanks - 45

- upwards
- A heartfelt thank you from 140
 - Harmony with others - 144 and up
 - Compassion - from 150 and on a fervent
- one
- Pity 3
 - Generosity - 995
 - Acceptance of reality - 46

A person who radiates love to all regardless of their qualities emits a vibration of 150 - up.

Chronic diseases vibrate at specific frequencies.

Love has the highest vibration.

Each cell has a field structure that has a consciousness - an information field.

Information is, is not, is or is being reflected.

Information is the fundamental essence of every manifestation - energy field, matter.

The information determines the internal state of the field, the object, the environmental impact, the received information (signals, etc.) is transformed.

Life is impossible from the surrounding information and energy field of every object.

Without information there is no existence, no development, no life.

The consciousness / information field / of the Earth contains all the information about the Earth;

Human consciousness has a multilayered structure in a hierarchical system; it receives, stores, renews, manages processes, motions, development, every creation.

Vibration frequencies

The vibration of a healthy human body during the day is between 62 and 68 MHz

When this vibration falls, human cells begin to change - to mutate. This is below the 62 MHz frequency.

At 58 MHz, the human body has the flu or cold

When candida is present in the body of a person, the frequency of the ablation is 55 MHz

When cancer occurs in the human body, the frequency is 42 MHz - 46 MHz.

At the onset of the death process, the frequency is measured at 20 MHz.

In the presence of negative thoughts, the feelings decrease the human frequency by 10-12 MHz

In meditative positive thinking, prayer vibration increases by 10-12 MHz

The frequency of parasites, viruses, and others is a sub-frequency range.

C. GENES

Genes control, but they are controlled.

Genes are much more than epigenetic

Not only feelings and experiences provoke epigenetic patterns in genes.

From the practice of Prof. Momchil Dobrev and Prof. Mariola Garibova it is proved that the thoughts of the person himself, the thoughts of other people, loads from previous lives, loads created from the present life, loads from other people, energy influence

Experiences, lessons.

The membrane determines how the gene will be read.

The membrane is influenced by both the field and the field information.

Each field has relevant information about itself.

But not only that.

The energy field around the cell, the fractal energy field, determines how the gene will be read.

The external environment not only suppresses the gene, it adjusts it so that it remains the same for the rest of this life.

The energy field contains information. The really higher dimension of the energy field is the consciousness of the cell in question.

Regulation flows from the energy field of the cell itself and the whole organism.

Gene regulation is not determined by the gene itself.

Regulation is accomplished through separate lists for each gene.

- Regulatory sequences -

- Whether transcription factors will be associated with triggers and how they will activate genes depends on the energy field around the cell, around the body,

The brain is the organ that, based on the generation of thoughts, the corresponding thoughts give the appropriate signal. Cells are conscious. Consciousness includes all information about the past, functions, self - organization, life.,

The evidence we apply below proves that the energy field of a parent influences the energy field of his child, and models from there his genes, and their regulation, which falls into harmony and coherence.

There is a coherence - at the energy level, at the field level, at the information level - at the level of consciousness of the respective energy field.

Each field and every dimension has an information field that can be called consciousness. This is information about the field, and its consistency with the entire universe.

Thoughts are frequency models that represent a corresponding field carrying relevant information.

Each higher dimension has a corresponding consciousness, which gives it access to all levels including the current level and other lower levels of dimension.

"Each dimension represents and has its density and characterizes it.

Genes produce a group of substances that actually control what happens in the body. Proteins guide all major biochemical processes in body cells. As enzymes, they penetrate the bloodstream. They also penetrate the cell. As hormones and neurotransmitters, they transmit signals, respectively, not only from cell to cell but also to individual parts of the body.

The proteins were captured by receiving stations located on the outside of the cell. These receptors are also proteins.

The construction plan for the production of the corresponding protein is recorded in the gene - DNA sequence.

Protein control means not only setting a specific building plan for its production, but also how much it will take.

Genes can be read in different ways.

READING DIFFERENT WAYS OF GENES MAKES AND DEPENDS ON THE GENUS BREEDING, MUSCLE TURNING OR MISSING, AND ON THE FIELD CREATED ABOUT THE GENE.

THE FIELD STRUCTURE OF THE GENE gives instructions on how to read the gene - HOW.

Therefore, the number of proteins - over 30,000 exceeds the number of genes 20,000 - 25,000.

Depending on WHAT the DNA orb is wrapped in, how it is twisted, overturned depends on how it will be read.

IMPORTANT LAW - READING IS A SPIRAL - A RIGHT SPIRAL.

Sequence of nucleotide elements and their formation of triplets (codons) are arranged in DNA - Threads - or nucleotide sequences or DNA sequences.
