Accepted Date: 05 July 2021

Abstract)

In this paper are described studies of the team of Prof. Momchil Dobrev and Prof. Mariola Garibova proving the truth about gen information - energy adaptation based on Energy-information Genetics, Energy-information Medicine, Energy-information-Psychology, I THEORY OF THE UNIVERSUM developed by Prof. Mariola Garibova and Prof. Lord Momtchil Döbrev - Halachev in the Year 2005, Basics of the Cosmological Theory of Information and Vortex Field Theory developed by Lord Prof. Momtchil Döbrev - the basic structure of the universe."

Keywords — theory, the universe, vortex field, energy-information genetics, adaptation.

I. INTRODUCTION

Prof. Momchil Dobrev and Prof. Mariola Garibova-Dobrev opened in 2008. The law of energy information gene adaptation is based on a study of the shapes, sizes, characteristics of young people in development who have been adopted. The conclusion is that children and their characteristics depend and are formed as a result of the energy - information fields of the persons, the parents, with whom the children live, and in whose presence the children develop and grow. It is decisive, and many

children are the biological heirs of the parents. The conclusion is necessary after a study of children and families whose children have been adopted.

This proves that this genetic adaptation is the basis and as a consequence of Energy-Information Genetics, Energy-Information Medicine, Energy-Information Psychology, Energy-Information Psychiatry. These sciences, in turn, are part of the Theory of the Universe created by Prof. Momchil Dobrev and Prof. Mariola Garibova-Dobrev in 2005.

Stepping on his theories Lord Prof. Dr. Momchil Dobrev, with the help of Prof. Mariola Garibova, 2005 both developed the "Theory of Universum" and related equipment and made research based on the fact that the chakras of the person who is the energy center are double whirlwinds that work in a specific way.

The results are undisputed and prove a new jade of medicine in the treatment of human diseases - both physically and mentally - holistically - based on the energy of human beings.

II. GENES - the basis and element for information and energy adaptation

Genes control, but they are also controlled.

Genes are much more than epigenetic structure and function.

It is not only feelings and experiences that provoke epigenetic patterns in genes.

From the practice of Prof. Momchil Dobrev and Prof. Mariola Garibova, it is proved that the thoughts of the person himself, the thoughts of other people, loads of previous lives, loads created by the present life, loads of other people, energy influence affect the formation of man.

From the practice of Prof. Momchil Dobrev and Prof. Mariola Garibova-Dobрева, it follows that when a child is in the phase of its development, the energy-information field of the parent with whom the child lives forms and influences and causes an energy-information adaptation, which is reflected. in the same physical forms - height, size, thickness,

The energy information field of the parent with whom the child lives more determines the shape and size of the child's physical body.

The energy information field of the parent and his feelings of love, care, attention, respect, thoughts, words, expressions determine the shape and size of the child's physical body.

Experiences, lessons.

The membrane determines how the gene will be read.

The membrane is affected by both the field and the information of the field from the environment, which includes energy - information fields of other people with whom the young organism lives.

Each field has the corresponding information about itself.

But not only that.

The energy field around the cell, the fractal energy field, determines how the gene will be read.

The external environment not only suppresses the gene but also readjusts it so that it remains the same until the end of this life. The energy-information field and environment around the energy-information field of the child, which is in the process of growth and development, determines the parameters of the change to which the energy-information field of the child is subjected, it also gives the parameters of this change, this adaptation, adaptive modification of the child's genome.

The energy field contains information. In reality, the higher dimension of the energy field is the consciousness of the respective cell.

The regulation comes from the energy field of the cell itself and of the whole organism.

The regulation of a gene is not determined by the gene itself.

Regulation is carried out by means of separate "lists" for each gene. The regulation also takes place as a result of the information energy field of the environment in which the young person lives, the environment in which he lives, with what parents, relatives, and others he grows.

- Regulatory sequences -

- Whether the transcription factors will be related to the triggers and how they will activate the genes depends on the energy field around the cell, around the body,

The brain is the organ that, based on the generation of thoughts, the corresponding thoughts give the corresponding signal. Cells have consciousness. Consciousness includes all information about the past, functions, self-organization, life.

Consciousness is the information field of the man himself, which determines his character, behavior, thoughts, feelings, emotions.

From the evidence we apply below, it is proven that a parent's energy field affects his child's energy field, and models from there his genes and their regulation, which falls into harmony and coherence and synchronization.

There is a coherence, synchronization - at the energy level, at the field level, at the information level - at the level of consciousness of the respective energy field.

Every field and every dimension has an information field that can be called consciousness. This is information about the field and its consistency with the whole universe.

Thoughts are frequency patterns that represent a corresponding field carrying the relevant information. Thoughts are also information that changes and affects the genome.

Each higher dimension has the appropriate consciousness, which gives it access to all levels, including the current level and the other lower levels of dimension.

Each dimension represents and has its own density and characterizes it.

Genes produce a group of substances that actually command what happens in the body. Proteins guide all the most important biochemical processes in the body's cells. As enzymes, they penetrate the bloodstream. They also penetrate the cell. As hormones and neurotransmitters, they transmit information signals not only from cell to cell but also to individual parts of the body.

The proteins were intercepted by receiving stations located on the outside of the cell. These receptors are also proteins.

The building block for the production of the corresponding protein is written in the gene - the DNA sequence.

Protein control means not only setting a specific building plan for its production but also in what quantity it will be carried out.

Genes can be read in different ways.

READING GENES DIFFERENTLY BECOMES AND DEPENDS on the folding of the GENE, its twisting or non-twisting, as well as on the field itself that is created around the gene.

Information and energy fold the gene. The shape of the folded gene is due to the energy-information field that forms it.

THE FIELD STRUCTURE OF THE GENE gives instructions on how to read the gene - **IN WHAT WAY.**

The field structure of the gene **DEPENDS** on the **FIELD STRUCTURE OF THE ENVIRONMENT**, on the

FIELD STRUCTURE OF THE ENVIRONMENT AROUND DNA ITSELF.

That is why the number of genes - over 30,000 exceeds the number of genes 20,000 - 25,000.

Depending on HOW the DNA is wound on a ball, how it is twisted, twisted depends on how it will be read.

IMPORTANT LAW - READING IS IN A SPIRAL - RIGHT SPIRAL.

The sequence of nucleotide elements and their formation of triplets (codons) are arranged in DNA - strands - or nucleotide sequences or DNA sequences.

III. Evidence for INFORMATION-ENERGY GENE ADAPTATION

Theory of vortex fields and human energy - based on two types of treatments

UNIVERSE THEORY - the combination of quantum theory and relativity with some corrections and new views on the vortex nature of space, cosmological information theory

FORCED GENE INFORMATION ENERGY - ADAPTATION - ADAPTATION

The reading of DNA at the same input information at the input **DEPENDS ON THE ENERGY STATE** of the human energy system - thoughts, feelings, subconscious - subconscious - past lives, energy interventions from outside, energy karmic bases, as well as the constant influence of the energy field of another a person who lives with that person who is the object of study.

The regulation of gene activity depends entirely on the daily influence of both:

- The energy-information fields from the outside include any kind of fields - human, energy-information fields of the environment, energy-information fields of the environment on the planet earth, the energy-information fields of the environment - the dwelling where one lives,
- Human energy information fields
- Energy information fields of food
- Energy-information relations between people
- The thoughts of the person himself - which represent an energy-information field
- The thoughts of other people - which are energy-information fields
- The energy-information field of the Earth and its influence
- Hereditary information - energy - information
- Energy information fields from other dimensions
- Energy-information fields of the environment.
- From the current energy-information state of the individual cell
- From the energy-information state of the whole human body
- From long-term energy-information fields-models - epigenetics
- Energy-information Perception from the outside world and information to the brain and the related limbic system.
- From the information-energy structure of stress, fear, apprehension, sadness, anger, or other emotional blockages,

-Energy-information structure of Past experiences

- Energy Information Blocks

- Energy - informational unconscious impressions - alarm reactions

-Thoughts / brain / consciousness - information field - physical matter

- Information field - to the brain - physical matter

The regulation of gene activity depends on the environment in which a particular human energy system is located - a person - in what environment, in what environment he lives, with what people, with whom a particular person, and the influence of the energy system as a whole on that person on the given person.

The gene is a fragment of the hereditary DNA molecule, which contains the building code of certain body Baltics. Each gene also has a so-called "gene trigger" - regulatory sequences.

The regulation of a gene determines whether and in what quantity the corresponding protein is produced.

The regulation of gene activity is not determined by the gene itself.

In the brain, the regulation of genes is subject to the constant influence of psychological signals.

From the middle - the middle is thoughts, food, fields, feelings, past lives - the subconscious.

A. A study that proved energy information gene adaptation.

This study proves the influence of the environment and, more precisely, the influence of the energy system of a person and a group of people on the energy system of the child - a young person who is in the process of growth and development between the ages of 3 to 18 years.

From the practice of Prof. Momchil Dobrev and Prof. Mariola Garibova, it is proved that you also think of the person himself, the thoughts of other people, loads from previous lives, loads created by the present life, loads from other people, energy influence

From the practice of Prof. Momchil Dobrev and Prof. Mariola Garibova-Dobrova, it follows that when a child is in the phase of its development, the energy-information field of the parent with whom the child lives forms and influences and causes an energy-information adaptation, which is reflected. in the same physical forms - height, size, thickness,

The energy information field of the parent with whom the child lives more determines the shape and size of the child's physical body.

The energy information field of the parent and his feelings of love, care, attention, respect determines the shape and size of the child's physical body.

The energy information field of the parent, including feelings, thoughts, verbal and nonverbal communication, affects the shape, the amount of development of the child's physical body.

Depending on the dominant role of the parent in a family, this affects the formation of the child's physical body - size, size, and others.

When the energy information system of the father is dominant, it affects the physical forms of the child.

They follow the size and physical shape of the parent.

The law proves that the energy information field of the parent influences the material structure, respectively the energy-information field of the child, the formation of physics, the physical form - size, dimensions, of the child.

The energy information field of the parent forms the physical body of the child, and before that, the energy information field of the parent forms the energy-information field of the child. It, in turn, forms matter.

It is the energy-information field of the parent forms the energy-information field of the child, which in turn forms his physical-material body.

It is this proves that the energy information field forms matter.

THE LAW OF FORMATION OF MATTER FROM THE ENERGY INFORMATION FIELD OF THE DOMINANT.

B. SUBJECT OF THE PRACTICAL RESEARCH

33 families who have adopted children were studied.

One-third are families who, as a family with a father and mother, have raised the adopted child up to the age of 20.

One-third are families whose one family member has either died or separated from the mother - with the children remaining with the mother for upbringing after the age of 7-13.

The result proving the energy information adaptation is the following:

When considering the primary signs of children, the following patterns are observed. Adopted children grow and acquire primary features - body structure, muscle structure, volume - thickness, groin, leg and arm bone structure, leg and arm muscles, body structure - with the abdomen, without abdomen on the face who grow them become a real copy of them.

This also applies to growth.

After studying the actual parents of the adopted children - their structure - muscular, and other height, volume, thickness, it is proved that their genetically adopted children have nothing to do with their genetic parents. Growth and size have nothing to do with the actual parents of the adopted children.

No weight, nobody structure, no thickness, no bone, and no muscle structure.

Adopted children accept the marks of their adoptive parents in every way. And mostly to the dominant parent. If the young organism is brought up or lives with only one of the parents, then it accepts the marks of that parent - whether it is a mother or a father.

Even the presence of a tummy in the adopter - especially the mother, determines the presence of a tummy in the adopted child. This is observed in all 33 surveyed families. Due to the huge database and the coincidence of the traits of the adopted child with the traits of the adoptive parents

in this material, it is not possible for us to present them. We present only the conclusions.

It is there is indisputable evidence of induced forced energy information gene adaptive modification of the adopted children regarding the adoptive parents - the parents who adopted and raised him from an early age between 3 and 18 years of age.

READING DNA DIFFERENTLY BECOMES AND DEPENDS on the folding of the **GENE**, its **TWISTING** or non-twisting, as well as on the field itself that is created around the gene.

THE TWISTING or non-twisting of DNA also occurs as a result of the **ENERGY INFORMATION FIELD** around the person and his body. The twisting or non-twisting of DNA depends on the overall energy-information field around the person.

THE INFLUENCE of this energy information field around a young person, which includes all components of information - emotions, thoughts, feelings, words, sounds, etc. is **MOST WHEN** this young person is in the process of development.

THE ADAPTATION of the energy-information field and its **DEPENDENCE ON** the energy-information field of the people with whom a young person lives in the same place in a family environment, in a living and environment, is maximal in the process of development and growth of the young person.

THE FIELD STRUCTURE OF DNA Around the energy-information field around the young person gives instructions on how to read the gene - **HOW** and how to express it - expressed.

The field structure of DNA **DEPENDS** on the **FIELD STRUCTURE OF THE ENVIRONMENT**, on the **FIELD STRUCTURE OF THE ENVIRONMENT AROUND DNA** itself.

The result proving the energy information; the ion adaptation is as follows:

When examining the primary characteristics of children, the following patterns are observed. Adopted children grow up and acquire primary features - body structure, muscular structure, volume, - thickness, slack, leg, and arm bone structure, leg muscles, and arms, body structure - with the abdomen, no abdomen who grow them become a real copy of them.

This also applies to growth.

After studying the actual parents of the adopted children - their structure - muscular, and other height, volume, thickness, it is proved that their genetically adopted children have nothing to do with their gene patents. Height and size have nothing to do with the actual parents of the adopted children.

Neither weight nor body structure, nor thickness, nor bone and muscle structure.

Adopted children accept the signs of their adoptive parents in every respect.

Even the presence of a tummy in the adopter - especially the mother, determines the presence of a tummy in the adopted child as well. This is observed in all 33 families studied. Due to the huge database and coincidence of the adopted child's characteristics with those of the

adoptive parents, it is not possible for us to present them. We present only the conclusions.

There is undisputed evidence of a compulsory energy-informative gene adaptive modification of adopted children regarding adoptive parents - parents who adopted and raised them from infancy between 3 and 18 years of age.

The information-energy field of the adopted children is directly and immediately influenced by the energy-information field of the parents or the parent with whom most of the time the child lives in one place in one dwelling and respectively these young people grow and acquire the primary features - body structure, the structure of the muscles, volume, - thickness, groin, the structure of the bones of the legs and arms, of the muscles of the legs, and arms, the structure of the body - with the abdomen, without the abdomen of the persons raising them to become their real copy.

This also applies to the height, structure, size of the human parts - arms, legs, torso, shoulders.

The lower sketches prove the above conclusions: the solid line shows the shapes of the adoptive parent and the child, and the dashed line shows the dimensions and shape of the child's true parents - his biological parents.

IV. Basics of the ENERGY- INFORMATION GENETICS, ENERGY- INFORMATION PSYCHOLOGY, ENERGY-INFORMATION PSYCHIATRY, ENERGY-INFORMATION MEDICINE, Энергийно информационната археология based on the THEORY OF THE UNIVERSUM developed by Prof. Mariola Garibova-Dobрева and Prof. Lord Momtchil Dobrev – Halachev in the year 2005, that includes the ENERGY-INFORMATION GENE ADAPTATION

The theory of universum, which in turn distinguishes:

- "energy-informative medicine"
- "energy-information genetics",
- "energy-information psychology"
- "energy-Information Psychiatry"
- "energy-information Archeology"

On the basis of the Cosmological Information Theory and Vortex Theory Theory, Mariola Garibova and Momtchil Dobrev elaborate 2005. Theory of Universum.

We will briefly state that, based on the research of the human energy system and how it affects precisely defined diseases such as the identification system and consequently as a method of therapy and healing, it has been proven that the chakras actually represent the human energy centers double swirls that can rotate both on one side and the other. The interdependence of man's energy is energetic in the environment at both the conscious and the subconscious level, and he has demonstrated the connection of human states, diseases, diseases to the state of man's energy system - chakras, energy flows, consciousness, subconscious.

In fact, diseases that have been studied by Mariola Garibova and Momtchil Dobrev have found an easy and

adequate explanation. This, in turn, not only provides an explanation for the types of illness but also gives a realistic guide to their therapy holistically - i.e. complex - physical and spiritual - ie. energy.

Based on these studies, the following sections of medicine, biology, psychology, genetics, - "energy-information genetics", - "energy-information psychology" - "Energy-Information Psychiatry"

Since the current article allows for such a voluminous viewing of matter that requires a monograph of at least 1500-2000 pages, we will give the results briefly below.

A. Consciousness and information

Information is the primordial essence that gives birth to everything and everything alive. Information is part of consciousness, which is a living system that stores, receives, renews, sends, manages the processes, movements, actions of life.

Consciousness / through information influences the energy field and accordingly through it on matter.

Consciousness / through information and based on signals from:

- The medium / through food /
- environment / nature, plants, animals /
- the environment / Earth's energy information field /
- the medium / information energy field of a person - another person /
- the medium / information - the energy field of the Sun /
- the environment / energy information field of the universe /
- the environment / other people's energy information fields /
- the environment / from the subconscious - from past lives, past experiences in, present and past experiences from previous lives

Information is influenced and controlled and controlled, commanded accordingly by energy fields, which in turn affect matter.

There is an energy-information matrix/consciousness / on Earth, in the sun, in the universe, in man.

Consciousness is an information field that is different for different types of density, depending on different dimensions of the field.

Consciousness is an information matrix that corresponds to and is composed of the consciousness of different fields - field structures.

For humans - depending on the fields - information fields have 12 dimensions of consciousness, the basis of which are types of vortex fields. Therefore, the DNA helix is double and counter-clockwise. Reading information from DNA is in that one and only direction.

This is the direction of reading and writing information. Snakes in antiquity show the generation of the power that reads information.

This is the direction of energy generation to maintain vortex fields.

The Twelve - the Six Double Threads Prove the Existence of a 12 Dimensional Dimension - Space - 12 Dimensions of Human DNA.

B. Vibrations, resonance - a method of treatment of diseased organs, structures

Resonance - a method of treating diseased structures and organs.

The importance of vibration for diagnosing the human body and organs and determining the correct diagnosis.

Each cell emits specific vibrations, and each organ emits specific vibrations. When an organ is healthy, it emits precisely defined frequencies in the frequency range between 7 and 8 meters. When an organ emits a frequency that is lower than the normal/healthy / frequency or higher than the healthy frequency, that organ is ill.

Separately, every human feeling radiates a precisely defined frequency.

Positive feelings such as joy, peace, love, silence, and others radiate frequencies that are harmonious with frequencies of harmony.

Negative thoughts such as fear, envy, anger, greed, hatred emit specific frequencies.

When one emits such frequencies that are specific to fear, envy, anger, hatred, the total cumulative frequency of the person is lower.

The cumulative frequencies are as follows:

- Lows from 2.7 to 9.7
- Lows above 9.7 to 26
- High - more than 28 to 56
- Senior - more than 56 to 115
- Highest - more than 115 - up to 205

Above 265 is the frequency of the next human race.

The "negative vibrations" are the following:

- Fear from 0.2 to 2.2
- Offense - from 0.6 to 3.3
- Outrage - 0.6 to 1.9
- Explosiveness - 0.9
- Rage - 0.5
- Anger - 1.4
- Gordelivostk - 0.8
- Pride - 3.1
- Neglect - 1.3
- Excellence - 1.9
- Pity - 3

The person who possesses positive qualities emits higher frequencies:

- Thanks - 45
- A heartfelt thank you from 140 upwards
- Harmony with others - 144 and up
- Compassion - from 150 and on a fervent one
- Pity 3
- Generosity - 995
- Acceptance of reality - 46

A person who radiates love to all regardless of their qualities emits a vibration of 150 - up.

Chronic diseases vibrate at specific frequencies.

Love has the highest vibration.

Each cell has a field structure that has a consciousness - an information field.

Information is, is not, is, or is being reflected.

Information is the fundamental essence of every manifestation - energy field, matter.

The information determines the internal state of the field, the object, the environmental impact, the received information (signals, etc.) is transformed.

Life is impossible from the surrounding information and energy field of every object.

Without information, there is no existence, no development, no life.

The consciousness/information field / of the Earth contains all the information about the Earth;

Human consciousness has a multilayered structure in a hierarchical system; it receives, stores, renews, manages processes, motions, development, every creation.

Vibration frequencies

The vibration of a healthy human body during the day is between 62 and 68 MHz

When this vibration falls, human cells begin to change - to mutate. This is below the 62 MHz frequency.

At 58 MHz, the human body has the flu or cold

When candida is present in the body of a person, the frequency of the ablation is 55 MHz

When cancer occurs in the human body, the frequency is 42 MHz - 46 MHz.

At the onset of the death process, the frequency is measured at 20 MHz.

In the presence of negative thoughts, the feelings decrease the human frequency by 10-12 MHz

In positive meditative thinking, prayer vibration increases by 10-12 MHz

The frequency of parasites, viruses, and others is a sub-frequency range.

C. GENES

Genes control, but they are controlled.

Genes are much more than epigenetic

Not only feelings and experiences provoke epigenetic patterns in genes.

From the practice of Prof. Momchil Dobrev and Prof. Mariola Garibova, it is proved that the thoughts of the person himself, the thoughts of other people, loads from previous lives, loads created from the present life, loads from other people, energy influence

Experiences, lessons.

The membrane determines how the gene will be read.

The membrane is influenced by both the field and the field information.

Each field has relevant information about itself.

But not only that.

The energy field around the cell, the fractal energy field, determines how the gene will be read.

The external environment not only suppresses the gene but also adjusts it so that it remains the same for the rest of its life.

The energy field contains information. The really higher dimension of the energy field is the consciousness of the cell in question.

Regulation flows from the energy field of the cell itself and the whole organism.

Gene regulation is not determined by the gene itself.

Regulation is accomplished through separate lists for each gene.

- Regulatory sequences -

- Whether transcription factors will be associated with triggers and how they will activate genes depends on the energy field around the cell, around the body,

The brain is the organ that, based on the generation of thoughts, the corresponding thoughts give the appropriate signal. Cells are conscious. Consciousness includes all information about the past, functions, self - organization, life,

The evidence we apply below proves that the energy field of a parent influences the energy field of his child and models from there his genes and their regulation, which falls into harmony and coherence.

There is a coherence - at the energy level, at the field level, at the information level - at the level of consciousness of the respective energy field.

Each field and every dimension has an information field that can be called consciousness. This is information about the field and its consistency with the entire universe.

Thoughts are frequency models that represent a corresponding field carrying relevant information.

Each higher dimension has a corresponding consciousness, which gives it access to all levels, including the current level and other lower levels of dimension.

"Each dimension represents and has its density and characterizes it.

Genes produce a group of substances that actually control what happens in the body. Proteins guide all major biochemical processes in body cells. As enzymes, they penetrate the bloodstream. They also penetrate the cell. As hormones and neurotransmitters, they transmit signals, respectively, not only from cell to cell but also to individual parts of the body.

The proteins were captured by receiving stations located on the outside of the cell. These receptors are also proteins.

The construction plan for the production of the corresponding protein is recorded in the gene - DNA sequence.

Protein control means not only setting a specific building plan for its production but also how much it will take.

Genes can be read in different ways.

READING DIFFERENT WAYS OF GENES MAKES AND DEPENDS ON THE GENUS BREEDING, MUSCLE TURNING OR MISSING, AND ON THE FIELD CREATED ABOUT THE GENE.

THE FIELD STRUCTURE OF THE GENE gives instructions on how to read the gene - HOW.

Therefore, the number of proins - over 30,000 exceeds the number of genes 20,000 - 25,000.

Depending on WHAT the DNA orb is wrapped in, how it is twisted, overturned depends on how it will be read.

IMPORTANT LAW - READING IS A SPIRAL - A RIGHT SPIRAL.

The sequence of nucleotide elements and their formation of triplets (codons) are arranged in DNA - Threads - or nucleotide sequences or DNA sequences.

V. Basics of the THEORY OF THE UNIVERSUM developed by Prof. Mariola Gariova and Prof. Lord Momtchil Dobrev – Halachev in the year 2005, basics of the Cosmological Theory of Information and Vortex Field Theory developed by Lord Prof. Momtchil DOBrev - Criticism of Relativity Theory and Supplementation of Quantum Theory

Basic Principles of THEORY of Universum - Unified Theory of the Universe, Critique of Relativity Theory and Supplementation of Quantum Theory

1991 Momchil Dobrev Dobrev creates Cosmological theory of information (Dobrev, 2009) and theory of vortex fields (Dobrev, 2012)- the basis of everything. In the same year, Momchil Dobrev created two free energy generators using the theoretical and practical solutions of both theories, creating prototypes but actually refusing to start regular production because he knows that all scientists and inventors create such generators soon after they are killed.

The real vortex theory proves the existence of swirling fields in the fabrication of matter at the lowest to the highest level, starting from the atomic structure to the construction of star systems, galactic systems of the universe. On the other hand, the vortex fields are also present in the construction and functioning of the human body.

On the other hand, the cosmological theory of information proves that vibrations are the basis of the existence of all objects in the universe and man in particular. Even at the cellular level, there are precisely defined vibrations of precisely defined frequencies and frequency spheres. Each cell, even every organ, vibrates with exactly the same frequency when it is in a state of health and certain other ones when it is in a disease state. The deviation from the interval norm of the "healthy" body vibrations proves the opposite that the body is sick.

In February 1985, Momchil Dobrev, under the leadership of Professor Karl Heinz von Gotte, found superconductivity, but because of the intervention of a Bulgarian state security agent then working at the Berlin embassy in Berlin and the US CIA, stealing materials and betraying them, but Momchil Dobrev Dobrev refuses, is forbidden to publish the discovery. So 1985 because of State Security cop Prof. Gote and Momchil Dobrev are not awarded the Nobel Prize in Physics. The Nobel Prize in two years has been given to two scientists from Switzerland to discover superconductivity in September 1985. - seven months after Prof. Gote and Momchil Dobrev.

The vortex fields actually carry, distribute, create both information and energy. There is actually a conversion of information into energy and vice versa. In fact, on the basis of the theory of the vortex fields, the passage of the material in the process of materialization and dematerialization is undisputed, in which the processes do not lose the information. On the other hand, the vortex fields are the basis of matter and antimatter. Swirl fields emit vibrations precisely defined and at specified intervals.

This is the relationship of the vortex fields with the cosmological information theory.

Three distinct principles apply to each swirling system:

There is a force that is at the heart of the whirlwind - in its center, and it controls the entire structure. For each imi structure, swirling forces that cause the structure to strive for the center, swirling forces that cause the structure to strive for external propagation, and a separate force that prevents objects from the structure from leaving the structure itself - that is, has the force of limiting the size of the structure.

Vortex structures are also hurricanes. In the center of hurricanes is peace.

There are chakras in the human body both at the physical level and at the other two levels, which besides supplying information and energy to the respective glands and levels and organs at these levels, but also raises the energy to the highest level.

The whirling structure that radiates the corresponding vibration - its section

Light is a vortex. Each electromagnetic wave is a whirl, the point at which both the electric field and the magnetic field are the zero point. Moreover, the space generating the vortices is geometrically based on the golden section, the numbers phi, and pi. Electromagnetic wave is a whirlwind in a straight line. A basic element in the cosmological theory of information is also to note the basic principle. The single field covers and is based on vortex fields. The dissemination of energy of information becomes unique with the swirling movements in a spiral way - right rotation. This is the easiest way to predict energy and information in the universe. That is why it is the connection of information and energy, i.e., both are transmitted in the same way. Only this is the way of spreading energy and information - the vortex fields. Energy and information are not distributed on INSTRUMENTS. THE VORTEX FIELD and its forms are THE BASIS OF THE SINGLE FIELD.

The vibrations had a swirling structure.

Only the vortex structure can spread in one space - in this case, the Cosmos.

Spreading information into space is purely a whirlwind principle.

The two theories prove that real human thought can be both a carrier of both information and energy and cause changes at the material level and at the spiritual level.

There are 12 dimensions of consciousness, the basics of which are types of vortex fields. Only On the first density

level (first, second and third dimension) lies our incarnate self.

At each density, the level corresponds to a certain type of matter and type of consciousness - that is, an information field with an information structure for the relevant plurality level.

Our first harmonic universe, or that of Earth, we have a biological structure that is based on carbon, and the matter is on a physical level.

In the depths of a harmonious universe where our souls inhabit, there is a silicon-carbon biological structure, and the matter is on a physical-etheric level, also called a semi-etheric level.

In a third harmonic universe, the creatures are composed of crystalline silicon, and the matter of net is entirely etheric.

The biological structure of the fourth harmonic universe, where the current levels of consciousness or the state of its current state are found, is a "crystalline liquid light," and the particles at that level are called premastery.

Dimensions 13, 14, and 15 at five density levels are composed of antimatter (other than antimatter), and the biology of the beings there is called "crystalline light radiation".

At the three levels above this dimension, namely Polaris, triadic and euatec levels, the beings are of pure consciousness, and these levels are not considered a dimension.

Our soul includes us and eleven incarnated personalities, or a total of twelve people.

Our soul, together with another 11 people, forms our air. Accordingly, the smell is composed of 144 incarnated personalities.

Twelve halves make up the Christ avatar, which includes 144 people and 1,728 incarnate personalities.

Accordingly, 12 Christ avatars are connected and makeup one rhesus adept.

The relics of the Adept include, in turn, a further 144 breaths, 1,728 people, and 20,736 incarnate figures.

All 12 personalities of the soul are placed in the so-called time vector. They are arranged as the clock on the dial is marked. In this way, 6 pairs of born persons are formed. These are 1 and 7, 2 and 8, 3 and 9, 4 and 10, 5 and 11, 6 and 12.

Most energy is allocated to pairs 12 and 6 as well as to pairs 3 and 9. These personalities are called "(the ethics" faces of the soul ".Most often, position 12 is a man, and position 6 is a woman. They have the same DNA template.

Clearing the link with your own avatar helps strengthen everyone's biofields and creates protection from negative intrusions up to 12 dimensions.

A. Whirlwinds, vibrations, information, energy.

The dissemination of information in space is only a whirlwind.

The information is read, recorded, modified in a vortex and vortex manner.

Even at the cellular level, there are precisely defined vibrations with precisely defined frequencies and frequency spectra.

Vibrations represent vortex fields.

Reading and executing information In DNA, it is only a vortex principle.

The whirlwinds - vortex principle is at the heart of the creation of universes with the sun and planets orbiting them.

Vortexes are the motions that control the motion in atoms.

Every cell, even every organ, vibrates with the exact frequency when it is in a healthy state and precisely defined others when in a diseased state. The deviation from the interval norm of a "healthy" organ vibration proves to the contrary that the organ is ill.

Vortex fields actually carry, propagate, generate both information and energy. There is actually a conversion of information into energy and vice versa. Indeed, based on the theory of vortex fields, the passage of the material in the process of materialization and dematerialization in which processes do not lose information is indisputably proven. Vortex fields, on the other hand, are the basis of material and antimatter. Vortex fields emit vibrations at precise and specified intervals.

This is the connection of vortex fields with the cosmological theory of information.

B. There are three definite principles for each vortex system:

There is a force underlying the whirlwind - at its center and commanding the whole structure. For each structure, there are vortex forces that cause the structure to aspire to the center, vortex forces that cause the structure to strive for outer space, and a separate force that prevents objects from the structure from leaving the structure itself - ie. there is a force limiting the size of the structure.

Vortex structures are also hurricanes. At the center of hurricanes is peace.

In the human body, there are chakras both at the physical level and at the other two levels, which, in addition to supplying information and energy to the relevant glands and levels and organs at these levels, also raises energy to the highest level.

The vortex structure that emits the corresponding vibration - its cross-section

Light is a whirlwind.

Each electromagnetic wave is a vortex, and the point at which both an electric field and a magnetic field are generated is the zero point.

In addition, the vortex-generating space is geometric, with the main factors here being the golden section, the numbers ϕ , and π .

As a consequence of the cosmological theory of information are the pyramids between which is the Pyramid of Cheops. This geometric figure is a generator of a corresponding field in which, at the corresponding points of height, when the corresponding frequency or so-called vibration is generated, the anti-gravity, the processes of dematerialization, and dematerialization are also generated.

An electromagnetic wave is a vortex in a straight line.

Both theories prove that real human thought can be a vehicle for both information and energy, and it can cause changes at the material and spiritual levels.

Both theories prove that real human thought can be a vehicle for both information and energy, and it can cause changes at the material and spiritual levels.

Testing experiments have been performed at the Scientific Research Institute Dobrev - Halachev AD to prove this.

According to the cosmological theory of information, in order to reach the chakras of the fourth and fifth dimensions of the soul, vibrations should be raised. This was happening in Egypt with a generator.

According to the cosmological theory of information, when a person raises his or her vibration that below 45 degrees with closed eyes generates a light beam with a corresponding vibration frequency, then that light beam and, accordingly, his gaze - with closed eyes below 45 degrees passes through a specific symbol - that is the symbol of Ankh, also known by Atlantis and the Atlanteans. This is the symbol through which the elevation and the corresponding look pass.

There are 12 dimensions of consciousness, the basis of which are types of vortex fields. Only one

Therefore, the DNA helix is double and counter-clockwise. Reading information from DNA is in that one and only direction.

This is the direction of reading and writing information.

Snakes indicate the generation of the power that the information reads.

This is the direction of energy generation and maintenance of vortex fields.

C. Movements in the Atomic Nucleus

The electrons move in an electronic field. The electron materializes as an electron after leaving the atomic field.

The nucleus of an atom creates a vortex field and rotates with a precisely defined vibration, which is the vibration of the nucleus and electron field.

Each atom vibrates with a specific spectrum and has a specific vibration.

D. MOVEMENT SYSTEM IN THE SOLAR SYSTEM

The solar system exists on the basis of rays that propagate along the Fibonacci trajectory of the golden section towards the end of the solar system, and from there, it returns back along the same trajectory to the center of the solar system - the sun. In these rays, vortex fields move along which concentric circles move planets to the solar system, perpendicular to the plane of motion of planets from the center of the solar system to the end solar system; there is a field that closes the field and makes it stable.

E. The ether is the medium for the movement of light.

F. Gravity is the result of the vortex motion in the solar system and the vortex motion of the Earth around its axis.

G. Whirlwinds

The chakras are vortices
Rotating motion - accelerating the field - the center generates free energy. Thus, and based on these truths, Prof. Momchil Dobrev 1991 created two free energy generators.
Ether - the essence of space and the medium for the movement of light.
Gravity is the result of vortex movements.
Different vortices
Light is a vortex - a linear vortex.
Vortexes in the plains.
The electromagnetic wave is a whirlwind
The neutrino carries information.
An electron is a materialized particle in an electron field - it materializes in an electron as it leaves the atom.
Rotating the kernel causes vibrations.
Vortices have different properties.
Feynman schemes - vortex interaction.
The rotation of the nucleus creates different space and electronic space-field.
An electron is a materialized object of electronic space.

H. The world is fluid.

The world is fluid - it is the middle - space. Just as the speed of sound is precisely defined in the middle - the fluid atmosphere,
As the velocity in water is precisely defined in the medium - the fluid - the aqueous medium.
So the speed of light is precisely defined in the medium - the fluid - the expanse of the ether.
The cyclone - a typhoon is fluid with an element in the center of a gas molecule.
The galaxy is fluid with an element in the center of the vortex - a star. Plasma is fluid. Types of fluids cause different spaces.
Fluids with homogeneous elements / homogeneous / homogeneous fluids.
Fluids with different heterogeneous elements - heterogeneous fluids.
Electrically neutral fluids
Polysyrin and fluids.
Electric and magnetized fluids
Ionized fluids - plasma.
The world is a fluid space. Ie, it is a closed system - the universe.
Vacuum is a heterogeneous fluid.
Hyperbolic geometry in physics.
Sound waves, electromagnetic waves are a kind of vortex field.
Space has a vortex character and essence
Space is a field, and it has a quantum character, a material character, an informational character, a conscious character.
Every vihir carries information - information
Space is fluid in nature. According to fluid in space, there are vortices that can be opened, closed vortices, point, linear, plane, and others.
The laws of thermodynamics are valid for fluids.

As the temperature decreases, the velocity of the gas component - the particle decreases faster than the gas volume, including the gas radius.

It thus follows that the ratio of the radius to the velocity increases, i.e., the passage of the gas portion along with the radius increases - i.e., this is evidence of an expanding universe.

Closed vortices have different shapes, one of which is fertilizer, and the other is a universe. The quantum is a vortex.

The first duality is "space + and" motion."

The first manifestation is a current in space

When space moves, it has a special quality - since it has no friction - that it never loses momentum but continues to flow.

I. The forces in space, the universe, the galaxy.

When space moves, there are TWO FORCES:

- a / the force that makes it move, being the aspiration of space for impulse

- b / the force which had hitherto kept him from moving, being the desire of space for inertia.

The pursuit of movement outweighs the pursuit of inertia,

The pursuit of inertia acts as a brake on motion, so the movement is slightly distorted.

Therefore, in the end, it returns to where it started and formed a rotating circle - such as the solar system, the galaxy system, the atomic system.

THE FIRST MOVEMENT IS A CURRENT SPACE.

After aeons, it returns from where it left,

THIS MAKES A HOLIDAY ROUND BELT.

This belt rotates in a plane, rotates with constant rotation.

The rotation in one plane continues until the stress it creates causes a new movement and does not start a new current in space - at right angles to the first, and the same process is repeated.

We now have two rotating planes, one in the other, and it is worth noting that the second plane is formed beyond the first, and therefore its diameter is larger.

The whole evolution depends on the difference and size of these planes.

When the higher acquires the same speed as the smaller and the older, it begins to attract an aspect of it, with the result that the older circle is drawn to the newer one.

The first circle should be considered as having an upper and lower surface. The upper surface of the upstream arch can be regarded as positive and the lower surface as negative. The downward arc is the opposite.

Same with the Second Emerging Circle.

These circles are mutually attracted and repulsed so that you can imagine the upper surface of the ascending arc (of the first circle) being positive, ascending to its corresponding aspect in the second cycle, and the lower surface of the returning arc pressing down so to get a second movement divided by rotating disks.

When this second movement completes its first lap and establishes its steady rotation, a new COSMOS occurs. This is the origin of the cosmos.

The secondary rotation of the first circle is the RING - THAT CANNOT BE MOVED, and the circle of the second formation is that sphere that sets the boundary of the Sphere - the so-called chaos.

There is a secondary branch on the outer sphere, and though it is a rotating circle of motion, that Cosmos represents the primary calmness, the immobility in which it is rooted.

It is the FRAMEWORK of the power of KOMSOM, that which assimilates and which alone allows the momentum to be acquired.

THE RING - The so-called Chaos arises from the reaction of the primal force to get its impetus.

It rotates at right angles to the primary rotation and counteracts it.

It is the attraction of the Ring - Chaos that establishes the Ring - COSMOS in its secondary motion and thus forms that secondary rotation which we call the RING - WHAT - CAN'T - BE - MOVE, the first restriction that restricts every universe, the galactic

That is why, in its essence, it is the ORIGINAL movement that enables space to emerge.

The Law of Counteraction - THE FIRST IMPULSE BREAKS A secondary impulse, so that a secondary impulse, in contrast to the first, creates stability.

The secondary rotation occurs as a reaction to the primary rotation.

The restriction is as its function is as a DISPLAY SUPPORT.

It should be understood as a limitation that allows pressure to emerge - as a rejection that allows concentration to be achieved.

Any progress toward a higher plan is a reaction to the constraint.

WE HAVE THE ORIGINAL ROTATION OF THE RING-COSMOS. The counteraction gives rise to the RING - the so-called Chaos, the attraction of the Ring-Chaos, causes the second rotation of the Ring-the Space, forming the Ring-which cannot-pass.

This motion in the RING-SPACE, rotating in a plane and at the same time rotating in space as if on an axis, sets a boundary beyond which the creations of the sphere cannot pass.

THIS SPHERE IS DANGEROUS BY TWO POWER LINES - RINGS - SPACE and RINGS - CHAOS, rotating at right angles to each other.

The rotation of the Ring-Cosmos is the source of the force from which evolution derives its impulse, and the rotation of the Ring-Chaos is the source of the force from which restriction draws its power.

THE RING - CHAOS did not belong to the dangerous sphere but to outer space.

THE RINGS OF THE RING-SPACE are facing the sphere that it encircles.

The aspirations of the RING - CHAOS are turned to the space that surrounds it.

The Ring - Space seeks to expand the center.

The Ring - Chaos seeks to expand the periphery.

The Ring - Space seeks to harden by contraction.

The Ring of Chaos seeks to return to the UNDERTAKEN from which it arose, and therefore, if its influence were unimpeded, it would reduce the sphere which is in danger.

THE RING - SPACE if its influence were unimpeded, it would be static in the immediate present.

THESE TWO INFLUENCES ARE THE SOURCE OF ALL POWER IN THE SPACE.

THE RING-SPACE, because it hardens, builds, THE RING-CHAOS, because it scatters, never grows.

POWER CIRCUITS THROUGH A ROTATE ANGLE WITH respect to each other and therefore in opposition, and that simply the angle of the first that arises is called "positive" and the opposite angle of the primary plane is called "negative" and is quite possible in another Space the first plane has started to rotate at another angle - the angle of your "negation".

In one galaxy are twelve beams and seven cosmic levels.

Space consisting of THREE rotating motions.

Movement in space - pure movement.

The primal movement that gives rise to all that exists begins before there is anything that moves.

SPACE is limited by this movement, which is called - THE RING - WHAT - CAN'T - CAN - BE - BE - MOVE. This is the limit of any galaxy, the solar system, of one atom.

There are also two-way movements.

The Ring of Space and the Ring of Chaos.

These three movements - the first trinity, so the supreme being in a new manifestation is always understood as the TRINITY - and three is a fundamental number.

Whatever subsequent tensions may arise, they cannot be regarded as a balance of these three forces:

a / The power of the Ring Space, which strives for the center.

b / the power of the Ring - Chaos - which strives for outer space.

in / the power of the Ring - which - cannot - be crossed, which maintains a balance between them and

The Ring - which cannot be transmitted is derived from the RING - SPACE and is, therefore, more a part of its nature than of the Ring-Chaos.

The Space Ring seeks to focus energy as the Ring Chaos seeks to dissipate.

The Chaos Ring cannot build anything because whatever force it generates, it is dissipated indefinitely in outer space.

The motion of the cosmic ring creates secondary vortices, and it is bounded by the ring - chaos, so the inward band expands into a rotating disk with a fixed center.

In practice, this becomes a rotating sphere. This system gives rise to rotating radii, which we call rays. This is a spiral connecting the center to the periphery

ie there are streams that flow to the periphery, then the stream flows to the center.

The center is a synthesis and balance of all forces.

ie there is a flow of rays from the outside and then inwards.

The outward flow stream is at the top, and the inward flow stream is down i.e. circular motions are created. The movement of rays and concentric circles. The rays are 12, and the concentric circles are seven

ie tangent raises are obtained. The intersection of circles and rays generates vortices - a tangential motion at an acute angle.

There are interactions between the rings, the interaction of the secondary rays and concentric circles, tangential motion.

There is the movement of rings, rays, and concentric circles, movement on tangents inside the segment, movement in vortices.
